

# Ideation

1. Research new technologies, specifically those that are related to mobile computing and web technology. You can find many areas where these technologies can be applied for the first time. Specifically you are looking for technologies that can be used to solve your driving question. List 3 technologies that you found:

Artificial Intelligence, Robotic Process Automation, Intelligent Apps

2. Propose 4-5 wild **big idea** solutions. You can sketch out your solutions or type them out. Get feedback on your solutions from 2-3 people. Record your feedback and the name of each individual that provided you feedback.

Artificial Intelligence will be able to communicate with other technologies like voice assistance, Netflix, uber, IoT devices and search engines like Google. Mother Response: Can communicate with other businesses who also own techs, and talk about how will they make a difference. Robotic Process Automation: Can reply to emails, organize data and processing transactions. Dad response: can analyze data on how much children/people are taken to human trafficking. They can also make a brochure on more information and ways to help stop human trafficking. Intelligent Apps: help you in making decisions based on real-time data or historical data. Abuelita response: can help too arrange data for further information and maybe can send information to the Robotic Process Automation so

that the RPA can send it to big businesses or an organization like the All Stars Project.

3. Use the feedback received on your wild ideas. Think up 2 **possible solutions** that take your feedback into consideration. You can sketch out your solutions or type them out. Get feedback on your solutions from 2-3 people.

Analyze data, arrange the data, once we have everything filled out we can start to send this information to organizations who help people out so that way they can also grow bigger on helping humanity.

Feedback: Mutter: Once the data is filled out they can send brochures to an organization who cares about people so that volunteers and staff can make difference on helping their community.

Vater: With more technology on the way people can reach out to more gov. offices or police department who seek more help from Anti-human trafficking

4. Choose the most **feasible solution**. Can this solution be created using

- HTML CSS Javascript,
- HTML5 Interactive Simulation,
- Or Another web based platform.

HTML/CSS

*You will need to add all this information to your Portfolio/  
Reflection Journal.*
